

Using EOCs for Epidemic Response: Virtual Public Health Emergency Management Training

Module 2 – post-module quiz

1. Briefly describe in your own words the importance of using data for decision-making in the context of an EOC.

2. What are some of the challenges or barriers that might affect or limit the use of data for decision-making in the context of an EOC?

3. Which of these are ways that data may be collected for use in an EOC? You may select more than one option (please circle or underline to indicate your response(s)).
 - a. Paper-based case reports
 - b. Laboratory results
 - c. Electronic health records
 - d. Social media
 - e. National surveillance system

4. In your own words, please define “surge capacity”, and briefly describe how it relates to resource management.

5. Organizational strategy, organizational culture, and financial position are three internal factors that can affect EOC resource management. Please select one and briefly (2-3 sentences) describe its impact on EOC resource management.

6. How do resource requirements, and approaches for managing resources, vary across the different response or activation levels of an EOC? (You may write up to 250 words)

Please send completed quiz to your facilitator.
